A usable structure should be provided for easily fastening lock pieces 3 to and releasing them from the axial member and putting the axial member in and out without any extra operation(s). A simple fastening device 10 having a structure where (1) a lock piece 3 is forced by a spring 4 to engage with an axial member 6 in a case 1, (2) when the axial member 6 is being inserted into the case 1, the lock piece 3 moves back from the axial member 6 and later, the lock piece 3 is engaged with the axial member 6 to be fastened with the axial member, and (3) the releasing member 5 and the lock piece 3 are jointed together in such a manner that the releasing member 5 is provided in the case 1 so as to move linearly and thereby move back the lock piece 3 from the axial member 6.
